Summary

A motivated, quick-learning computer programmer with a strong background in full-stack web development, computer graphics, and mathematics; adept at a variety of programming languages and comfortable with a number of industry-standard frameworks; and capable of effective communication in a fast-paced, team-oriented environment.

Education

Western Kentucky University (WKU) | Bowling Green, KY
BS in Computer Science

- Student of WKU's Honors College
- Successful member of the Chinese Flagship Program for five semesters
- Date of Graduation: May 2017
- Major Coursework:
    - Computer Science I-III, Intro to Database, Computer Organization and Architecture, Numerical Analysis I, Data Structure and Algorithm Analysis, Intro to Web Programming, Programming Languages, Operating Systems I, Intermediate Software Project, Software Engineering
- Related Coursework:
    - Calculus I, Calculus II, Multivariable Calculus, Differential Equations, Intro to Linear Algebra, Probability and Applied Statistics

Experience

- Proficient with many computer programming languages, including JavaScript/Typescript, PHP, SQL, Bash, Java, C/C++, Objective-C, HTML, CSS
- Familiar with many other languages, including C#, Python, Go, and Mathematica
- Capable with Git, Subversion, and Perforce version control systems
- Versed in back-end development, specifically PHP with Apache/IIS and Node.js/Express
- Familiar with a number of web frameworks including Laravel, Zend, and Express
- Effective with containerization and orchestration using Docker and Docker Compose
- Comfortable in a variety of front-end development libraries, including both React (with and without Next.js) and React Native, Vue.js, as well as jQuery, Bootstrap, Pug/Jade
- Competent with Mac, Linux, and Windows operating systems
- Efficient in group environments having:
    - Supervised four student workers in developing and maintaining over ten different, active web applications at a time
    - Provided a number of internal tools and services for coworkers as requested on top of other, more immediate duties

Employment

February 2017 – Present: Instructional Technologist I for the Center of Innovative Teaching and Learning (CITL)
WKU, Bowling Green, KY

- Design, implement, and maintain a custom PHP framework to solve our unique problems as well as avoid excess dependencies
- Devise and develop a testing suite providing unit, functional, integration, and acceptance tests for our PHP framework
- Maintain and monitor a MySQL server and countless databases used in hosting development, testing, and production data
- Generate reports from various, numerous database tables using complex, multi-step queries
- Preserve web applications' security and protect the associated, sensitive data before and after its transition to a database
- Build an API to allow secure, external communications with our server
- Create a robust JavaScript front-end system to simplify fetching and posting of data, streamlining the process of managing dynamic site content
- Migrate CSS styles to Bootstrap classes in upgrading our framework and reducing front-end maintenance and overhead
- Introduce a number of new libraries, tools, and resources in keeping our system up-to-date and refraining from reinventing unnecessarily
- Train and supervise student web developers in our framework, conventions, and workflow
- Enforce standards and lead code reviews in aiming to maintain the integrity of our codebase

June 2016 – February 2017 (Up to 40 Hours Each Week During Summer and Winter): Student Web Developer for Distance Learning
WKU, Bowling Green, KY

- Coded various features, fixes, and tests in PHP and JavaScript
- Developed various web applications' front-ends using CSS and HTML, with JavaScript/JQuery allowing for dynamic content
- Utilized AJAX calls to post and fetch data to and from our own server as well as various APIs
- Engaged in origin control with Git to maintain code progress
- Performed FTP uploads and downloads to a sandbox test server, allowing developer-specific programming and testing
- Edited Microsoft Excel documents to maintain the captioning logistics
- Designed Microsoft Word documents to aid in informing newcomers of transcribing and captioning processes
- Coordinated with various coworkers to help meet their needs in either Transcription Services, Dashboard, or Synergy virtual communications
